

Changebridge Capital Long/Short Equity ETF (CBL)

Listed on NYSE Arca, Inc.

Summary Prospectus dated November 11, 2020

Before you invest, you may want to review the Fund's prospectus and statement of additional information ("SAI"), which contain more information about the Fund and its risks. The current prospectus and SAI dated November 11, 2020, are incorporated by reference into this Summary Prospectus. You can find the Fund's prospectus, reports to shareholders, and other information about the Fund online at <https://www.changebridgefunds.com/long-short-equity-cbls-prospectus/>. You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to ETF@usbank.com.

IMPORTANT NOTE: Beginning on January 1, 2021, paper copies of the Fund's shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the shareholder reports from your financial intermediary, such as a broker-dealer or bank. Instead, the shareholder reports will be made available on a website, and you will be notified by mail each time a report is posted and provided with a website link to access the report.

You may elect to receive all future Fund shareholder reports in paper, free of charge. If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. Please contact your financial intermediary to inform them that you wish to continue receiving paper copies of Fund shareholder reports and for details about whether your election to receive reports in paper will apply to all funds held with your financial intermediary.

Investment Objective

The Changebridge Capital Long/Short Equity ETF (the "Fund") seeks long-term capital appreciation while minimizing volatility.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, sell, or hold shares of the Fund ("Shares"). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table an Example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.70%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.25%
Total Annual Fund Operating Expenses	1.95%

¹ Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$198 **3 Years:** \$612

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund ("ETF") that seeks to achieve its investment objective by purchasing securities Changebridge Capital, LLC (the "Adviser"), the Fund's investment adviser, believes to be undervalued and taking short positions in securities the Adviser believes will decline in price. The Fund will generally have net long exposure of between 30%-70% of net assets.

The Adviser identifies securities to purchase for the Fund primarily through quantitative and qualitative analysis of U.S.-listed large-, mid-, or small-capitalization companies. The Fund's long positions are generally expected to be comprised of equity securities or depositary receipts. The Adviser typically looks to purchase securities of companies it believes will outperform the market over the course of an entire market cycle (typically between 5 and 11 years) while maintaining overall portfolio volatility that is lower than that experienced by the broader market.

Investment selection for the Fund's long positions focuses on companies that are facing temporary uncertainties and potential problems that are specific to those individual companies or the companies' industry or sector and companies that the Adviser believes are undervalued and/or overlooked by the market. The Adviser may consider, among other quantitative factors, quality (returns on invested capital), value (free cash flow yield), momentum (three-month total price return), size (market cap), and volatility (change in stock price). This data is structured through proprietary and third-party datasets. In addition, the Adviser will also take into consideration the results of its fundamental analysis, which may include an assessment of competitors, suppliers, customers, and replacements. This information may be obtained via sources including management meetings, company filings, and industry research. The Adviser also considers an assessment of a company's environmental, social, and governance ("ESG") attributes in determining the attractiveness of an investment opportunity. These attributes include a company's impact on the environment, relationships with employees, suppliers, customers, and in the communities in which they operate, as well as a broad range of governance policies, including board and management structures, executive and board diversity, information disclosure, and employee compensation levels.

The Adviser considers all of the above factors in determining which securities to purchase and sell. As a result, the Fund's portfolio may be composed of a variety of companies with different attributes that make them attractive (*e.g.*, attractive valuation, sound fundamentals and solid ESG attributes), however, any single security may not have all three attributes.

The Adviser seeks to identify positions for the Fund to sell short based on the Adviser's assessment of the likelihood of a decline in the value of the security in the short term. For example, the company may have declining fundamental measures such as earnings or revenue, have a weakening market position relative to other similar companies, or be considered by the Adviser to be an overvalued/overhyped company. Securities selected for short selling may also include companies expected to underperform relative to their sector or industry.

A short sale is a transaction in which the Fund sells a security it does not own, typically in anticipation of a decline in the market price of that security. To effect a short sale, the Fund arranges through a broker to borrow the security it does not own to be delivered to a buyer of such security. In borrowing the security to be delivered to the buyer, the Fund will become obligated to replace the security borrowed at the time of replacement, regardless of the market price at that time. A short sale results in a gain when the price of the securities sold short declines between the date of the short sale and the date on which a security is purchased to replace the borrowed security. Conversely, a short sale will result in a loss if the price of the security sold short increases. When the Fund makes a short sale, the broker effecting the short sale typically holds the proceeds as part of the collateral securing the Fund's obligation to cover the short position.

In general, the Fund's investments are broadly invested over a number of sectors, but the Fund may focus on the technology, consumer, and healthcare sectors.

Under normal circumstances, at least 80% of the Fund's net assets, plus borrowings for investment purposes, will be invested long or short in equity securities, including common stocks and depositary receipts.

The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objective. The following risks could affect the value of your investment in the Fund:

- **Associated Risks of Short Selling.** Short selling involves the sale of securities borrowed from a third party. The short seller profits if the borrowed security's price declines. If a shorted security increases in value, a higher price must be paid to buy the stock back to cover the short sale, resulting in a loss. The Fund may incur expenses related to short selling, including compensation, interest or dividends, and transaction costs payable to the security lender, whether the price of the shorted security increases or decreases. The amount the Fund could lose on a short sale is theoretically unlimited. Short selling also involves counterparty risk – the risk associated with the third party ceasing operations or failing to sell the security back.

- **Depository Receipts Risk.** American Depository Receipts (“ADRs”) involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries and changes in the exchange rates of foreign currencies. ADRs listed on U.S. exchanges are issued by banks or trust companies, and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares.
- **ESG Risk.** Applying ESG criteria to the investment process may exclude securities of certain issuers for non-investment reasons and therefore the Fund may forgo some market opportunities available to funds that do not use ESG criteria. The Fund’s incorporation of ESG considerations may affect its exposure to certain sectors and/or types of investments, and may adversely impact the Fund’s performance depending on whether such sectors or investments are in or out of favor in the market.
- **Equity Market Risk.** The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, sectors or companies in which the Fund invests. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stocks and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.
- **ETF Risks.** The Fund is an ETF, and, as a result of this structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants (“APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Cash Redemption Risk.* The Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., short positions). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the NYSE Arca, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Large Shareholder Risk.** To the extent a large proportion of the shares of the Fund are highly concentrated or held by a small number of shareholders (or a single shareholder), including funds or accounts over which the Adviser or an affiliate of the Adviser has investment discretion, the Fund is subject to the risk that these shareholders will redeem Fund Shares in large amounts rapidly or unexpectedly. In addition, a third party investor, the Adviser or an affiliate of the Adviser, an authorized participant, a lead market maker, or another entity may invest in the Fund and hold its investment solely to facilitate commencement of the Fund or to facilitate the Fund’s achieving a specified size or scale (i.e., a seed investor). In such case, an investor may own a majority of the Fund’s shares. Similar to other large shareholders, there is a risk that such seed investors may redeem all or a significant portion of their investment in the Fund with little or no notice to the Fund. Any such redemptions could adversely affect the ability of the Fund to conduct its investment program, including by causing the Fund to dispose of investments at unfavorable times or increase its cash holdings, diluting its investment returns. An unexpected large redemption also may have an adverse effect on the market price of the Fund’s Shares.

- **Long/Short Risk.** The Fund seeks long exposure to certain securities and short exposure to certain other securities. There is no guarantee that the returns on the Fund’s long or short positions will produce positive returns, and the Fund could lose money if either or both the Fund’s long and short positions produce negative returns.
- **Management Risk.** Your investment in the Fund varies with the success and failure of the Fund management team’s investment strategies and the Fund management team’s research, analysis, and determination of portfolio securities. If the Adviser’s investment strategies do not produce the expected results, the value of the Fund would decrease.
- **Market Capitalization Risk**
 - *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
 - *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large capitalization stocks or the stock market as a whole.
 - *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.
- **New Fund Risk.** The Fund is a recently organized management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision. Additionally, the Adviser has not previously managed a registered fund, which may increase the risks of investing in the Fund.
- **Non-Diversification Risk.** Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a small number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a small number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and have a greater impact on the Fund’s performance. However, the Fund intends to comply with the diversification requirements of the Internal Revenue Code of 1986, as amended (the “Code”) to qualify for treatment as a regulated investment company (“RIC”). For more information, please see the section entitled “Federal Income Taxes” in the SAI.
- **Sector Risk.** To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors. The Fund may invest a significant portion of its assets in the following sectors and, therefore, the performance of the Fund could be negatively impacted by events affecting each of these sectors.
 - *Consumer Sectors Risk.* The success of consumer product manufacturers and retailers is tied closely to the performance of domestic and international economies, interest rates, exchange rates, competition, consumer confidence, changes in demographics and consumer preferences. Companies in the consumer staples sector, such as companies that produce or sell food, beverage, and drug retail or other household items, may be adversely impacted by changes in global and economic conditions, rising energy prices, and changes in the supply or price of commodities. Companies in the consumer discretionary sector, such as automobile, textile, retail, and media companies, depend heavily on disposable household income and consumer spending, and may be strongly affected by social trends and marketing campaigns. These companies may be subject to severe competition, which may have an adverse impact on their profitability.
 - *Health Care Sector Risk.* Companies in the health care sector are subject to extensive government regulation and their profitability can be significantly affected by restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure (including price discounting), limited product lines, an increased emphasis on the delivery of healthcare through outpatient services, loss or impairment of intellectual property rights and litigation regarding product or service liability.
 - *Information Technology Sector Risk.* Market or economic factors impacting information technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund’s investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government

regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

- **Value Investing Risk.** Because the Fund may utilize a value style of investing, the Fund could suffer losses or produce poor results relative to other funds, even in a rising market, if the Adviser's assessment of a company's value or prospects for exceeding earnings expectations or market conditions is incorrect.

Performance

Performance information for the Fund is not included because the Fund did not have a full calendar year of performance prior to the date of this Prospectus. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.changebridgefunds.com or by calling the Fund toll-free at 1-800-617-0004.

Portfolio Management

Adviser Changebridge Capital, LLC

Portfolio Manager Ross Klein and Vincent Lorusso are the Fund's portfolio managers and are primarily responsible for the day-to-day management of the Fund's portfolio. Messrs. Klein and Lorusso have been the portfolio managers of the Fund since its inception in November 2020.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

Recent information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.changebridgefunds.com.

Tax Information

The Fund's distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Fund's investment adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.
